# **Chapter 9**

## **Units and Equivalents**

### **General**

Various lists, tables, and charts are included in this section for the convenience of geologists compiling information on rates, volumes, and quantities of sediment, rock formations, and geologic processes. The only explanations in the tables and charts are those necessary to give the basis for the information presented. The conversion factors shown are generally four significant digits; more precise conversion factors of five or more significant digits may be needed in some instances. In all conversions, retain enough significant digits to ensure that accuracy is neither sacrificed nor exaggerated.

### **Metric System (SI) Conversion**

Most of the procedures, formulas, and tables in this handbook are presented in English units. Conversion factors are included in this chapter for those who wish to use the metric system. Table 9-1 shows pertinent base units of the International System of Units (SI), and table 9-2 shows prefixes to be used with SI units.

Table 9-1.—Base units of the International System (SI)

Base unit		
Quantity	Name	Symbol
Length	meter (metre) <sup>1</sup>	m
Mass <sup>2</sup>	kilogram	kg
Time	second	s

<sup>1</sup>Both spelling are acceptable.

<sup>2</sup>Weight is the commonly used term for mass.

Table 9-2.—Prefixes for use in multiples of International System (SI) units

Mutiplier	Prefix	Symbol
$10^{18}$	exa	E
$10^{15}$	peta	P
$10^{12}$	tera	T
$10^9$	giga	G
$10^6$	mega	M
$10^3$	kilo	k
$10^2$	hecto <sup>a</sup>	h
$10^1$	deka <sup>a</sup>	da
$10^{-1}$	deci <sup>a</sup>	d
$10^{-2}$	centi <sup>a</sup>	c
$10^{-3}$	milli	m
$10^{-6}$	micro	$\mu$
$10^{-9}$	nano	n
$10^{-12}$	pico	p
$10^{-15}$	femto	f
$10^{-18}$	atto	a

<sup>a</sup>These prefixes are generally not recommended.  
Multiples of 1,000 are preferred.

## Rules for Style and Usage

The choice of the appropriate prefix (multiplier) of an SI unit is governed by convenience. The multiple chosen for a particular application is the one that yields numerical values within a practical range.

Use a slash (/) to form a compound unit by dividing one unit by another, e.g., m/s, kg/m<sup>2</sup>.

Area or volume units are indicated by the appropriate superscript, e.g., km<sup>2</sup> or m<sup>3</sup>.

Do not use multiple prefixes, such as dkm or  $\mu$ ml.

## Conversion Factors

<u>To Convert</u>	<u>Into</u>	<u>Multiply By</u>
A acre	hectares or square hectometers square feet (sq ft) <sup>a</sup> square meters (m <sup>2</sup> ) square miles (sq mi)	0.4047 43,560. 4,047. $1.562 \times 10^{-3}$
acre-feet (acre-ft)	cubic feet (cu ft) cubic yards (cu yd) gallons (gal) megaliters (ML) cubic meters (m <sup>3</sup> ) cubic dekameters (dam <sup>3</sup> ) acre-inches cubic feet/acre	43,560 1,613. 325,850. 1.234 1,234. 1.234 12.00 68.06
acre-feet/square mile (acre-ft/sq mi)	tons/square mile (T/sq mi) tons/acre watershed inches cubic meters/square kilometer (m <sup>3</sup> /km <sup>2</sup> )	See fig. 9-1 See fig. 9-1 <sup>b</sup> 0.01875 476.3 1,359. 1.234
acre-feet of water	tons cubic dekameters (dam <sup>3</sup> ) megagrams (Mg)	1,234.

<sup>a</sup>These abbreviations may be used when their meaning is clear; otherwise spell them out.

<sup>b</sup>After getting tons/square mile from figure 9-1, multiply by  $1.56 \times 10^{-3}$  to convert to tons/acre.

## Other Conversions

Figures 9-1A and 9-1B are charts for converting various volume-weights or weights of sediment per acre-foot to tons. Table 9-3 is convenient for conversions of hydraulic or sedimentation data. Table 9-4 shows the Greek alphabet. Table 9-5 shows map scales and equivalents for use with aerial photographs and U.S. Geological Survey quadrangles. Table 9-6 illustrates conversion of volume-weight between pounds per cubic foot and tons per acre-foot. Table 9-7 shows conversion of inches to feet.

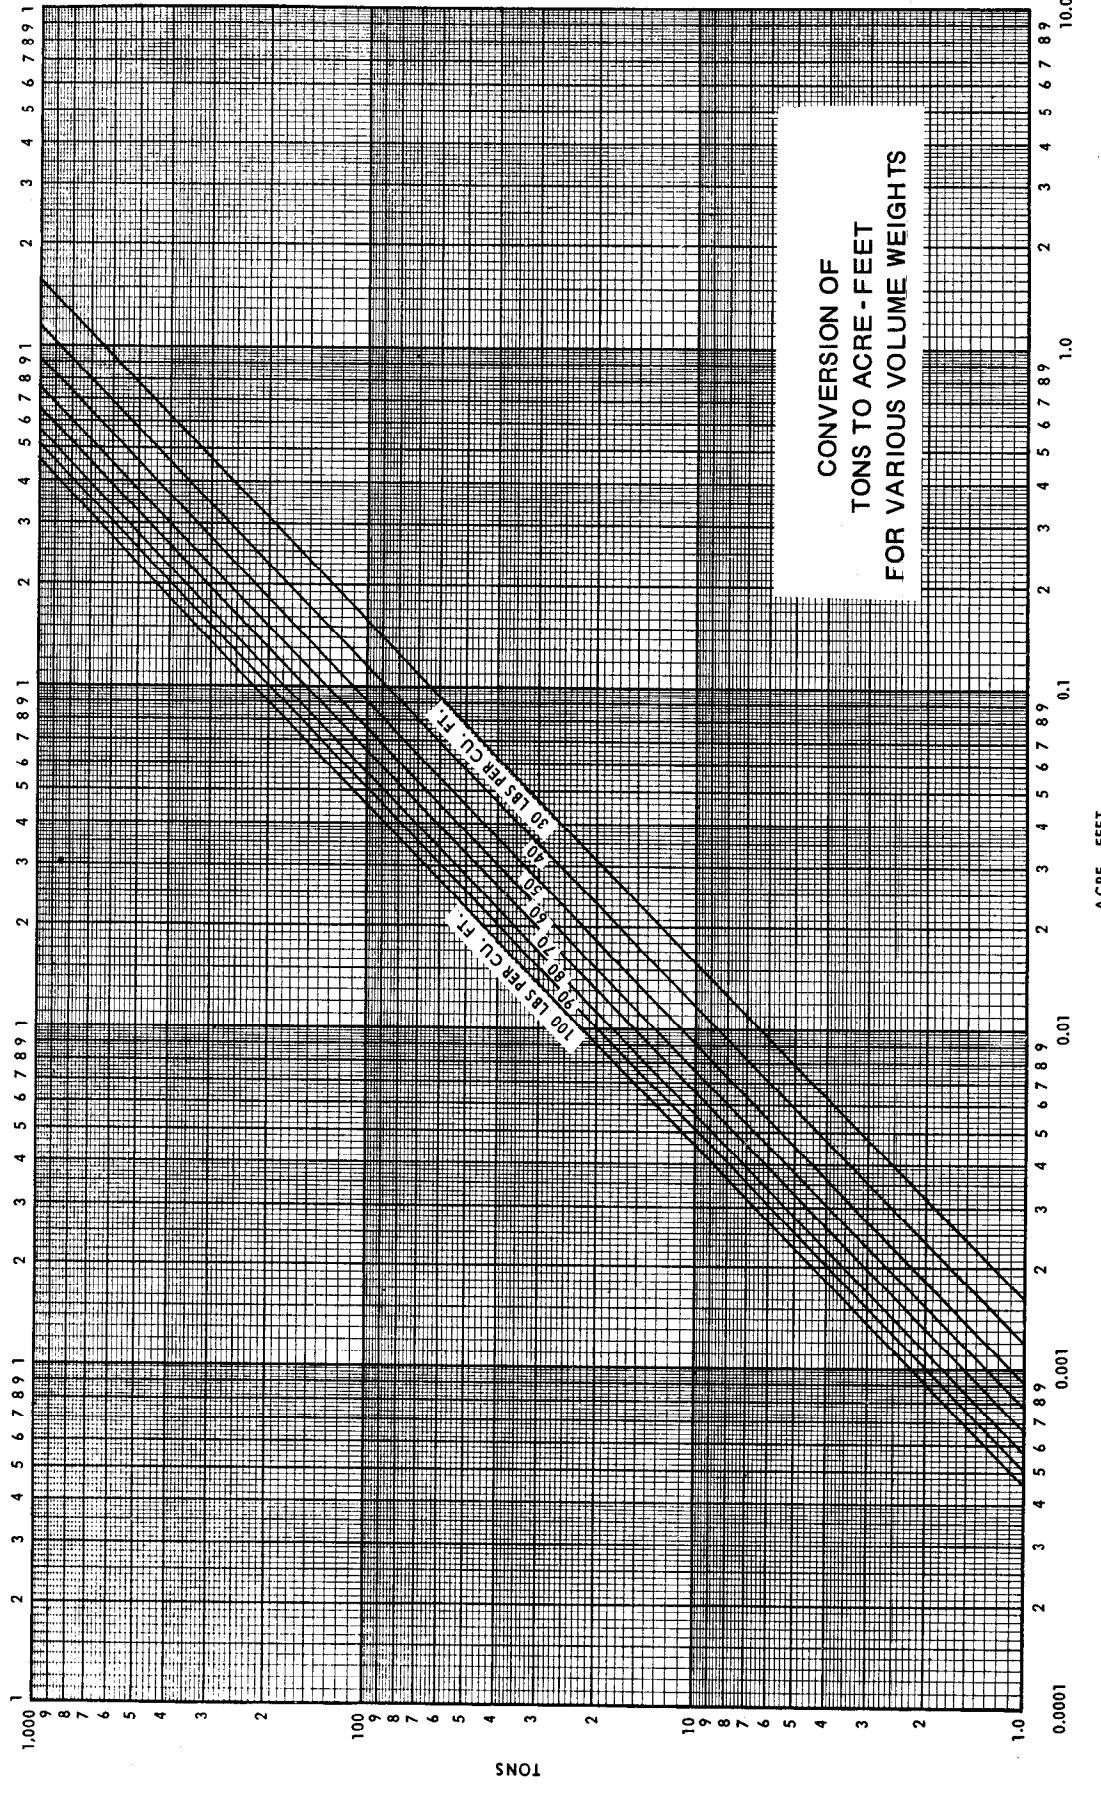

Suspended sediment and sediment yield can be converted from parts per million by weight to tons as follows:

$$\frac{\text{ppm} \times \text{discharge (cu ft per period)} \times 62.4}{1,000,000 \times 2,000 \text{ (or } 2 \times 10^9\text{)}} = \text{sediment yield (tons per period)}$$

$$\frac{\text{ppm} \times \text{cfs} \times 86,400 \times 62.4}{2 \times 10^9} = \text{ppm} \times \text{cfs}$$

$$\times 0.0027 = \text{sediment yield (tons per day)}$$

Table 9-7.—Conversion of inches to feet

1 in. = 0.08 ft	7 in. = 0.58 ft
2 in. = 0.17 ft	8 in. = 0.67 ft
3 in. = 0.25 ft	9 in. = 0.75 ft
4 in. = 0.33 ft	10 in. = 0.83 ft
5 in. = 0.42 ft	11 in. = 0.92 ft
6 in. = 0.50 ft	12 in. = 1.00 ft
